

New Product for 2025 BB60-CO Breather Box®

Air Systems International introduced the first portable breathing air filtration system in 1984 that was used in the closed position-the Breather Box®. That product, called the BB50-CO, has been the state of the art for breathing air filtration for over 40 years. Today in 2025, we have improved our breathing air portable breathing filtration unit to meet the demands of the 21st century. Here is a few of the highlights of the upgraded new Breather Box®, BB60-CO, with improvements over the BB50-CO unit and designed to fit in the existing portable Breather Box® at the same cost.

Current BB50-CO

New BB60-CO

- 1) Increased filtration capacity in excess of 60 cfm with auto drains in the first two filters
- 2) Filtration removes particulates at 99.9999% and oil removal efficiency at 99.8%
- 3) Less pressure drop on each filter stage with differential pressure indicators on each filter
- 4) Filtration has compact design with higher performance utilizing metal and polymers
- 5) Each filter uses a polymer bowl locking system (no metal bowl guard like the old filter system)
- 6) The new filters operate down to 23 degrees F (-5C) and up to 140 degrees F (60C)

For those with BB50 models, don't be alarmed.

We'll be stocking replacement filter elements for the next few years.

The BB60-CO will replace the BB50-CO in our product line starting March 2025 at the same price as the BB50-CO.

Acceptance of purchase orders for BB50-CO Breather Boxes® will continue through April 30, 2025, and inventory for those will be on a first come first serve basis.
